

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1-20. (canceled)

21. (currently amended) A method of identifying financial instruments meeting user-defined investment criteria, comprising the steps of:

receiving ~~retrieving~~ financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

calculating ~~processing~~ using the financial instrument data to identify values for a plurality of searchable parameters for particular financial instruments in said financial instrument data;

creating accounts for users wishing to identify financial instruments;

receiving user-defined search criteria for said searchable parameters;

storing in relation to the accounts the user-defined criteria for searching the searchable parameters;

comparing the user-defined search criteria with the values identified for the searchable parameters for the particular financial instruments;

identifying at least one of the financial instruments having values for the searchable parameters matching the user-defined search criteria;

transmitting to the user for display data identifying at least one of the financial instruments having values for the searchable parameters matching the user-defined search criteria;

receiving modified user-defined search criteria for said searchable parameters;

comparing the modified user-defined search criteria with the values identified for the searchable parameters for the particular financial instruments;

identifying at least one of the financial instruments having values for the searchable parameters matching the modified user-defined search criteria; and

transmitting to the user for display data identifying at least one of the financial instruments having values for the searchable parameters matching the modified user-defined search criteria.

22. (previously presented) The method of claim 21, wherein the financial instruments are stock options.

23. (previously presented) The method of claim 21, wherein the financial instruments are stocks.

24. (previously presented) The method of claim 21, wherein the financial instruments are bonds.

25. (previously presented) The method of claim 21, wherein the financial instruments are commodities.

26. (cancel)

27. (currently amended) The method of claim 21 ~~26~~, wherein said step of calculating data values for the searchable parameters from the financial instrument data comprises the step of calculating values for at least one of the following search parameters: Black-Scholes value, percent if called, percent if not called, in the money, out of the money, volatility, earnings change, and spread between called and not called.

28. (previously presented) The method of claim 21, wherein the step of comparing the user-defined search criteria with the values identified for the searchable parameters comprises the step of searching financial instrument data comprising at least one of the following: open interest; option month; spread between called and not called; price; volume; volatility; price earnings ratio; earnings change; percentage volume change; number of shares; range between high and low values; and put options.

29. (previously presented) The method of claim 21, comprising the further step of: confirming that a user is authorized to request a search of the searchable parameters.

30. (previously presented) The method of claim 29, wherein said step of confirming that a user is authorized to request a search of the searchable parameters comprises the step of confirming that a user has paid prior to executing a search of the searchable parameters.

31. (previously presented) The method of claim 29, wherein said step of confirming that a user is authorized to request a search of the searchable parameters comprises the step of confirming that a user has registered prior to executing a search of the searchable parameters.

32. (cancel)

33. (previously presented) The method of claim 21, wherein said user-defined search criteria comprises at least one range of values for said searchable parameters.

34. (previously presented) The method of claim 33, wherein said at least one range of values comprises a maximum value and a minimum value.

35. (previously presented) The method of claim 33, wherein said at least one range of values comprises values greater than a user-defined value.

36. (previously presented) The method of claim 33, wherein said at least one range of values comprises values less than a user-defined value.

37. (previously presented) The method of claim 33, wherein said at least one range of values comprises a range of percentages.

38. (previously presented) The method of claim 21, wherein said step of accepting user-defined search criteria for said searchable parameters comprises the step of receiving user-defined search criteria over the Internet.

39. (previously presented) The method of claim 38, comprising the further step of accepting user-defined search criteria formatted by a Web browser.

40. (previously presented) The method of claim 21, wherein the step of identifying a set of financial instruments comprises the step of transmitting data identifying a set of financial instruments across the Internet to the user.

41. (previously presented) The method of claim 40, further comprising the step of formatting the data identifying the set of financial instruments for receipt by a Web browser.

42. (original) The method of claim 21, further comprising the step of storing the values identified for the set of searchable parameters in a database.

43. (canceled)

44. (currently amended) A computer-readable medium comprising computer-executable instructions for identifying financial instruments meeting user-defined investment criteria, the computer readable medium being readable by a computer to process the instructions to perform the following steps:

receiving ~~retrieving~~ financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

calculating ~~processing~~ using the financial instrument data to identify values for a plurality of searchable parameters for particular financial instruments in said financial instrument data;

creating accounts for user wishing to identify financial instruments;

receiving user-defined search criteria for said searchable parameters;

storing in relation to the accounts at least one user-defined set of criteria for searching the searchable parameters;

comparing the user-defined search criteria with the values identified for the searchable parameters for the financial instruments having values matching the user-defined search criteria;

identifying at least one of the financial instruments having values for the searchable parameters matching the user-defined search criteria;

transmitting to the user for display data identifying at least one of the financial instruments having values for the searchable parameters matching the user-defined search criteria;

receiving modified user-defined search criteria for said searchable parameters;

comparing the modified user-defined search criteria with the values identified for the searchable parameters for the particular financial instruments;

identifying at least one of the financial instruments having values for the searchable parameters matching the modified user-defined search criteria; and

transmitting to the user for display data identifying at least one of the financial instruments having values for the searchable parameters matching the modified user-defined search criteria.

45. (currently amended) A method of providing financial instrument data to a user over a computer communications network, comprising the steps of:

receiving ~~retrieving~~ financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

calculating using the financial instrument data values for a plurality of searchable parameters for particular financial instruments in said financial instrument data;

creating a database of searchable data, ~~from the financial instrument data~~, said database comprising ~~for financial instruments identified in the financial instrument~~ the calculated data values for a plurality of searchable parameters;

receiving user-defined search criteria via the computer communications network;

maintaining a database of user account information, said database of user account information comprising stored in relation to user accounts the user-defined criteria for searching the searchable parameters;

searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the user-defined search criteria;

returning a representation of at least one of the plurality of financial instruments having values for the searchable parameters satisfying the user-defined search criteria to the user over the computer communications network;

receiving modified user-defined search criteria via the computer communications network;

searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the modified user-defined search criteria;

returning a representation of at least one of the plurality of financial instruments having values for the searchable parameters satisfying the modified user-defined search criteria to the user over the computer communications network.

46. (previously presented) The method of claim 45, wherein the financial instrument data relates to stocks.

47. (previously presented) The method of claim 45, wherein the financial instrument data relates to stock options.

48. (previously presented) The method of claim 45, wherein the financial instrument data relates to bonds.

49. (previously presented) The method of claim 45, wherein the financial instrument data relates to commodities.

50. (cancel)

51. (previously presented) The method of claim 45, wherein said step of creating the database of searchable data from the financial instrument data comprises the step of calculating values for at least one of the following: Black-Scholes value, percent if called, percent if not called, in the money, out of the money, volatility, earnings change, and spread between called and not called.

52. (previously presented) The method of claim 45, wherein said step of searching the database of searchable data comprises the step of searching for defined values of at least one of the following data items: open interest; percent if called; percent if called; percent if not called; in the money; out of the money; option month; spread between called and not called; minimum and maximum search criteria; price; volume; volatility; Black-Scholes value; price earnings ratio; earnings change; percentage volume change; number of shares; range between high and low values; and put options.

53. (previously presented) The method of claim 45, comprising the further step of: confirming that a user is authorized to request a search of the searchable parameters.

54. (previously presented) The method of claim 53, wherein said step of confirming that a user is authorized to request a search of the searchable parameters comprises the step of confirming that a user has paid prior to executing a search of the searchable parameters.

55. (previously presented) The method of claim 53, wherein said step of confirming that a user is authorized to request a search of the searchable parameters comprises the step of confirming that a user has registered prior to executing a search of the searchable parameters.

56. (cancel)

57. (currently amended) A computer-readable medium comprising computer-executable instructions for identifying financial instruments meeting user-defined investment criteria, the computer readable medium being readable by a computer to process the instructions to perform the following steps:

receiving ~~retrieving~~ financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

calculating using the financial instrument data values for a plurality of searchable parameters for particular financial instruments in said financial instrument data;

creating a database of searchable data, ~~from the financial instrument data~~, said database comprising the calculated values for a plurality of searchable parameters ~~for financial instruments identified in the financial instrument data~~;

receiving user-defined search criteria via the computer communications network;

maintaining a database of user account information, said database of user account information comprising stored in relation to user accounts the user-defined criteria for searching the searchable parameters;

searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the user-defined search criteria;

returning a representation of at least one of the plurality of financial instruments having values for the searchable parameters satisfying the user-defined search criteria to the user over the computer communications network;

receiving modified user-defined search criteria via the computer communications network;

searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the modified user-defined search criteria; and

returning a representation of a least one of the plurality of financial instruments having values for the searchable parameters satisfying the modified user-defined search criteria to the user over the computer communications network.

58. (currently amended) A server system for searching for financial instruments, comprising programmed to perform the following steps:

a database; and

executable computer instructions for performing the following:

requesting financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

receiving financial instrument data from at least one data source;

calculating using the financial instrument data values for a plurality of searchable parameters for particular financial instruments in said financial instrument data;

creating a database of financial instrument data from at least one data source;

creating a database of searchable data ~~from the financial instrument data~~, said database comprising the calculated for each of a plurality of financial instruments values for a plurality of searchable parameters;

receiving user-defined search criteria via the computer communications network;

maintaining a database of user account information, said database of user account information comprising stored in relation to user accounts the user-defined criteria for searching the searchable parameters;

searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the user-defined search criteria;

returning a representation of at least one of the plurality of financial instruments having values for the searchable parameters satisfying the user-defined search criteria to the user over the computer communications network;

receiving modified user-defined search criteria via the computer communications network;

searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the modified user-defined search criteria; and

returning a representation of a least one of the plurality of financial instruments having values for the searchable parameters satisfying the modified user-defined search criteria to the user over the computer communications network.

59. (currently amended)      The server system of claim 58, wherein the financial instruments are stock options.

60. (currently amended)      The server system of claim 58, wherein the financial instruments are stocks.

61. (currently amended)      The server system of claim 58, wherein the financial instruments are bonds.

62. (currently amended) The server system of claim 58, wherein the financial instruments are commodities.

63. (currently amended) The server system of claim 58, wherein said step of returning a representation of at least one of the plurality of financial instruments comprises transmitting a representation of the at least one of the plurality of financial instruments over the Internet.

64. (currently amended) The server system of claim 58, wherein said step of receiving user-defined search criteria comprises receiving the user-defined search criteria from the Internet.

65. (currently amended) A method of identifying financial instruments meeting user-defined investment criteria to a user, comprising the steps of:

requesting financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

presenting to a user a set of searchable parameters;

accepting user-defined search criteria for said searchable parameters;

transmitting the user-defined search criteria to a server for searching for financial instruments having values for the searchable parameters corresponding to the user-defined search criteria;

maintaining at the server a database of user account information, said database of user account information comprising stored in relation to user accounts the user-defined criteria for searching the searchable parameters;

accepting from the server a set of financial instruments having values for the searchable parameters matching the user-defined search criteria;

presenting to a user the set of financial instruments having values for the searchable parameters matching the user-defined search criteria;

accepting modified user-defined search criteria for said searchable parameters;

transmitting the modified user-defined search criteria to a server for searching for financial instruments having values for the searchable parameters corresponding to the user-defined search criteria;

accepting from the server a set of financial instruments having values for the searchable parameters matching the modified user-defined search criteria; and

presenting to a user the set of financial instruments having values for the searchable parameters matching the modified user-defined search criteria.

66. (previously presented)     The method of claim 65, wherein the financial instruments are stock options.

67. (previously presented)     The method of claim 65, wherein the financial instruments are stocks.

68. (previously presented)     The method of claim 65, wherein the financial instruments are bonds.

69. (previously presented)     The method of claim 65, wherein the financial instruments are commodities.

70. (previously presented)     The method of claim 65, wherein the searchable parameters comprises at least one of the following: open interest; option month; spread between called and not called; price; volume; volatility; price earnings ratio; earnings change; percentage volume change; number of shares; range between high and low values; and put options.

71. (previously presented)     The method of claim 65, comprising the further steps of:

receiving from the user, data for establishing an account; and  
transmitting to the server, the data for establishing an account.

72. (previously presented) The method of claim 65, wherein said user-defined search criteria comprises at least one range of values for said searchable parameters.

73. (previously presented) The method of claim 72, wherein said at least one range of values comprises a maximum value and a minimum value.

74. (previously presented) The method of claim 72, wherein said at least one range of values comprises values greater than a user-defined value.

75. (previously presented) The method of claim 72, wherein said at least one range of values comprises values less than a user-defined value.

76. (previously presented) The method of claim 72, wherein said at least one range of values comprises a range of percentages.

77. (previously presented) The method of claim 65, wherein said step of transmitting the user-defined search criteria to a server comprises transmitting the user-defined search criteria over the Internet.

78. (previously presented) The method of claim 65, wherein said step of accepting from the server a set of financial instruments comprises receiving the set of financial instruments from the Internet.

79. (previously presented) The method of claim 65, wherein the user-defined search criteria has been formatted using a Web browser.

80. (previously presented) The method of claim 65, wherein the set of financial instruments is formatted for receipt by a Web browser.

81. (currently amended) A computer-readable medium comprising computer-executable instructions for identifying financial instruments meeting user-defined investment

criteria, the computer readable medium being readable by a computer to process the instructions to perform steps comprising:

requesting financial instrument data from at least one data source, said financial instrument data reflecting current market conditions;

presenting to a user a set of searchable parameters;  
accepting user-defined search criteria for said searchable parameters;  
transmitting the user-defined search criteria to a server for searching for financial instruments having values for the searchable parameters corresponding to the user-defined search criteria;

maintaining at the server a database of user account information, said database of user account information comprising stored in relation to user accounts the user-defined criteria for searching the searchable parameters;

accepting from the server a set of financial instruments having values for the searchable parameters matching the user-defined search criteria;

presenting to a user the set of financial instruments having values for the searchable parameters matching the user-defined search criteria;

accepting modified user-defined search criteria for said searchable parameters;  
transmitting the modified user-defined search criteria to a server for searching for financial instruments having values for the searchable parameters corresponding to the user-defined search criteria;

accepting from the server a set of financial instruments having values for the searchable parameters matching the modified user-defined search criteria; and

presenting to a user the set of financial instruments having values for the searchable parameters matching the modified user-defined search criteria.

82. (previously presented) The method of claim 22 wherein the step of receiving user-defined search criteria for said searchable parameters comprises the step of receiving user-defined search criteria for at least one of the following searchable parameters: spread between called and not called; percent if not called; percent if called; volume; open interest; stock price; in the money; and out of the money.

83. (previously presented) The method of claim 82, wherein the step of presenting to a user the set of financial instruments comprises the step of compiling a list of stock options, wherein the list identifies for each stock option at least one of the following: stock name; stock symbol; option symbol; strike month; strike price; bid; volume; open interest; percent if not called; and percent if called.

84. (previously presented) The method of claim 47 wherein the step of receiving user-defined search criteria comprises the step of receiving user-defined search criteria for at least one of the following searchable parameters: spread between called and not called; percent if not called; percent if called; volume; open interest; stock price; in the money; and out of the money.

85. (previously presented) The method of claim 84, wherein the step of returning a representation of at least one of the particular financial instruments comprises the step of returning a list of stock options, wherein the list identifies for each stock option at least one of the following: stock name; stock symbol; option symbol; strike month; strike price; bid; volume; open interest; percent if not called; and percent if called.

86. (previously presented) The method of claim 59 wherein the step of receiving user-defined search criteria comprises the step of receiving user-defined search criteria for at least one of the following searchable parameters: spread between called and not called; percent if not called; percent if called; volume; open interest; stock price; in the money; and out of the money.

87. (previously presented) The method of claim 86, wherein the step of returning a representation of at least one of the plurality of financial instruments comprises the step of returning a list of stock options, wherein the list identifies for each stock option at least one of the following: stock name; stock symbol; option symbol; strike month; strike price; bid; volume; open interest; percent if not called; and percent if called.

88. (previously presented) The method of claim 66 wherein the step of accepting user-defined search criteria for said searchable parameters comprises the step of accepting user-defined search criteria for at least one of the following searchable parameters: spread between called and not called; percent if not called; percent if called; volume; open interest; stock price; in the money; and out of the money.

89. (previously presented) The method of claim 88, wherein the step of presenting to a user the set of financial instruments comprises the step of presenting a list of stock options, wherein the list identifies for each stock option at least one of the following: stock name; stock symbol; option symbol; strike month; strike price; bid; volume; open interest; percent if not called; and percent if called.

90. (previously presented) The method of claim 21, further comprising creating a database of searchable data from the financial instrument data, said database comprising for financial instruments identified in the financial instrument data values for a plurality of searchable parameters, and wherein

comparing the user-defined search criteria with the values identified for the searchable parameters for the particular financial instruments comprises searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the user-defined search criteria;

transmitting to the user for display data identifying at least one of the financial instruments having values for the searchable parameters matching the user-defined search criteria comprises returning a representation of at least one of the plurality of financial instruments having values for the searchable parameters satisfying the user-defined search criteria;

comparing the modified user-defined search criteria with the values identified for the searchable parameters for the particular financial instruments comprises searching the database of searchable data for financial instruments having values for a plurality of searchable parameters that satisfy the modified user-defined search criteria; and

transmitting to the user for display data identifying at least one of the financial instruments having values for the searchable parameters matching the modified user-defined

**DOCKET NO.:** POPT-0002  
**Application No.:** 09/524,205  
**Office Action Dated:** June 7, 2006

**PATENT**

search criteria comprises returning a representation of at least one of the plurality of financial instruments having values for the searchable parameters satisfying the modified user-defined search criteria.
